

Unlike traditional surfactants, **FRANCHISE**[®] is specifically formulated for Strobilurin fungicides - though can be used with a variety of chemistries - and increases droplet deposition while minimizing variability in performance. **FRANCHISE** combines a Leci-Tech surfactant system with a stress reducing compound which differentiates it from other surfactants.

FEATURES

- Designed to help enhance aerial applications
- Specifically formulated for strobilurin chemistries
- NPE-free liquid formulation
- Contains LECI-TECH[®], a unique technology that assists overall spray performance

RATES

Aerial: 1-2 fl oz/A

Ground: 3-4 fl oz/A

In aerial applications, **FRANCHISE** with Leci-Tech disperses into crops much better than a crop oil.

BENEFITS

- Improves droplet deposition and spreading
- Consistently minimizes variability of strobilurin performance
- Proprietary formula is particularly helpful to crops that are experiencing stress
- Approved to be used from V16-VT

DATA + RESULTS

FRANCHISE works to decrease driftable fines, especially when compared with an oil-based adjuvant. Achieving a controlled rate of driftable fines increases droplet deposition and minimizes variability in performance.
